CREATE VALUE

ANALYTICS

Analytics and Business Intelligence become the key differentiator when it comes to predictive KPIs and making sense of all the data you have collected from your various devices, RF scanner and EDI.

Visualize the right data for the right people – this is not about making a report pretty; it is about balancing experience versus analytics for decision making.

Business Intelligence is an environment in which business users receive information that is reliable, secure, consistent, understandable, easily manipulated and timely. With this information, business users are able to conduct analyses that yield an overall understanding of where the business has been, where it is now, and where it will be in the near future. Business Intelligence empowers workers to make more informed, smarter business decisions faster.

pmc utilizes the rich business framework of SAP's Business Objects to create customized dashboards that empower your users to make effective, informed decisions based on solid data and analysis. All users, from the high-end analyst to the

casual business user, have access to the information they need with minimal dependence on IT resources and developers

Our Analytics consulting uses the power of SAP Business Objects BI dashboards and can be customized to your specific requirements.

Templates

We have created dashboard templates in various areas of SAP ERP.

Dashboards, Cockpits and Scorecards

They provide a graphical view of key performance indicators and the ability in drill down into details.

Analysis

They provide dimensional views of data and run against SAP and non-SAP data sources.
