

ACHIEVE EXCELLENCE
CREATE VALUE

SUPPLY CHAIN

Streamlining and implementing solid business processes in your Sales, Logistics, Purchasing, Quality and Maintenance areas will drive the overall integrity of your company.

Because of our focus in the automotive and manufacturing industries, our consulting skills are solid and honed through various SAP projects.

Sequencing, JIT Calls, Delivery Orders, Mais Pickup sheet, commodity pricing, simplified shipping, SCAC, Transport Modes, eInvoicing/NFe, outside processors, Direct Ship, 3rd Party Processing, Commodity Procurement, Honda Flex Forecasting, inbound deliveries, Handling Unit Management, Warehousing, Traceability, Heatcodes, Quality Notifications, Vendor evaluation, 8D, APQP, PPAP, Plant Maintenance are no foreign words to us.

Our approach to supply chain and operations is two fold: we can provide consulting for a very narrow business requirement or become your supply chain partner by implementing all sales, logistics and purchasing processes. This approach gives you maximum flexibility and we know how to work in a multi-vendor environment always to your advantage.

Our consulting covers all aspects of your supply chain and operations business:

Customer Logistic:

Integration of your customer demand drives how your business processes have to look like in the customer facing process – the process for a Honda looks totally different than the one for a Chrysler. Shipping needs to be flawless! Therefore we added SAP integrated scanning functions to fulfill scan-to-create and scan-to-verify processes. All rounded up by the right barcode labels and forms using adobe technology.

Supplier Logistics:

Deployment of release and approval strategies, blanket purchasing, integration into sourcing and MRP, to an integrated inbound receiving process using handling units. A solid integration of outside processors using adobe interactive forms provides you with an effective and complete vendor supply chain cycle.

Materials Logistics:

Lean Inventory and Warehouse Management processes are the key for an effective materials handling operations. Simplified SAP frontends using touchscreen functionality make the life of any materials handler easier and provides a full cradle-to-grave traceability.

Operations:

Fully integrated quality business processes covering supplier, internal manufacturing and customer requirements. Nothing will fall thru the “cracks”. 8D reporting and corrective actions can be handled as well as reporting of various quality KPIs. The aim is to optimize both internal and external operations in the interests of quality assurance and responsible care.

Solution alignment:

pmcIntegrate, pmcAutomate, pmcOptimize, pmcInteractive, and pmcAccelerate add-on's.
